

ABSTRACT OF THE DISCLOSURE

A flange yoke includes a base element having a flange plate. A first bearing portion, formed integrally with the flange plate and projecting from a first end face of the flange plate, has a first bearing bore. A first attachment face is provided on the
5 first end face. A first abutment face extends from the first attachment face. A connection face is arranged on a second end face of the flange plate, with which the base element is detachably connectable to a mating flange. A bearing element having a flange portion has a second attachment face that abuts the first attachment face 10 and a second abutment face that abuts the first abutment face. The bearing element
10 includes a second bearing portion having a second bearing bore and is detachably connected by attachment screws to the base element.
